

Hammers

Parts of a Hammer

Hammers are sold by the weight, style and function.

Can you name the styles above ?

Types of Hammers

20oz claw Hammer

Pin Hammer

The heavier the hammer the larger the nail it is used for.

A pin hammer is used for driving panel pins 20mm 17 gauge

A 20oz hammer is used for 6inch round wire nails.

Each would be useless if used in reverse rolls

shank

Cross section
Solid metal
shank

Mallets

- Traditional wooden mallets used with chisel to chop out mortises and remove wood.

- Rubber mallet used when care is needed not to mark surfaces or when fitting glass

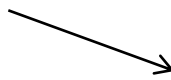

Mallets

-

Japanese style wooden mallets also used with chisel to chop out mortises and remove wood.

- Carvers wooden mallet

- Urethane quiet mallets

Types of Pincers

Pincers are used to extract nails or broken screws

Nail Punch

Position punch on top of nail head and strike with hammer.

This drives the nail below the surface and allows filler to be applied therefore concealing the nail head

Trim nail punch, magnetic tip nail sits in tip and then push nail into material finish using hammer.
